Sports-Related Concussion and Head Injury Fact Sheet and Parent/Guardian Acknowledgement Form

A concussion is a brain injury that can be caused by a blow to the head or body that disrupts normal functioning of the brain. Concussions are a type of Traumatic Brain Injury (TBI), which can range from mild to severe and can disrupt the way the brain normally functions. Concussions can cause significant and sustained neuropsychological impairment affecting problem solving, planning, memory, attention, concentration, and behavior.

The Centers for Disease Control and Prevention estimates that 300,000 concussions are sustained during sports related activities nationwide, and more than 62,000 concussions are sustained each year in high school contact sports. Second-impact syndrome occurs when a person sustains a second concussion while still experiencing symptoms of a previous concussion. It can lead to severe impairment and even death of the victim.

symptoms of a previous concussion. It can lead to severe impairment and even death of the victim. Legislation (P.L. 2010, Chapter 94) signed on December 7, 2010, mandated measures to be taken in order to ensure the safety of K-12 student-athletes involved in interscholastic sports in New Jersey. It is imperative that athletes, coaches, and parent/guardians are educated about the nature and treatment of sports related concussions and other head injuries. The legislation states that: All Coaches, Athletic Trainers, School Nurses, and School/Team Physicians shall complete an Interscholastic Head Injury Safety Training Program by the 2011-2012 school year. All school districts, charter, and non-public schools that participate in interscholastic sports will distribute annually this educational fact to all student athletes and obtain a signed acknowledgement from each parent/guardian and student-athlete. ☐ Each school district, charter, and non-public school shall develop a written policy describing the prevention and treatment of sports-related concussion and other head injuries sustained by interscholastic student-athletes. Any student-athlete who participates in an interscholastic sports program and is suspected of sustaining a concussion will be immediately removed from competition or practice. The student-athlete will not be allowed to return to competition or practice until he/she has written clearance from a physician trained in concussion treatment and has completed his/her district's graduated return-to-play protocol. **Ouick Facts** Most concussions do not involve loss of consciousness You can sustain a concussion even if you do not hit your head A blow elsewhere on the body can transmit an "impulsive" force to the brain and cause a concussion Signs of Concussions (Observed by Coach, Athletic Trainer, Parent/Guardian) Appears dazed or stunned Forgets plays or demonstrates short term memory difficulties (e.g. unsure of game, opponent) Exhibits difficulties with balance, coordination, concentration, and attention Answers questions slowly or inaccurately Demonstrates behavior or personality changes Is unable to recall events prior to or after the hit or fall **Symptoms of Concussion (Reported by Student-Athlete)** ☐ Headache Sensitivity to light/sound □ Nausea/vomiting Feeling of sluggishness or fogginess ☐ Balance problems or dizziness Difficulty with concentration, short term □ Double vision or changes in vision memory, and/or confusion

Wł	nat Should a Student-Athlete do if they think they have a concussion?	
	Don't hide it. Tell your Athletic Trainer, Coach, School Nurse, or Parent/Guardian.	
	Report it. Don't return to competition or practice with symptoms of a concussion or head injury.	
	The sooner you report it, the sooner you may return-to-play.	
	Take time to recover. If you have a concussion your brain needs time to heal. While your brain	
	is healing you are much more likely to sustain a second concussion. Repeat concussions can	
	cause permanent brain injury.	

_	nat can happen if a student-athlete continues to play with a concussion or returns to play to soon?	
	Continuing to play with the signs and symptoms of a concussion leaves the student-athlete vulnerable to second impact syndrome.	
	Second impact syndrome is when a student-athlete sustains a second concussion while still having symptoms from a previous concussion or head injury.	
	Second impact syndrome can lead to severe impairment and even death in extreme cases.	
Sh	ould there be any temporary academic accommodations made for Student-Athletes who have	
	fered a concussion?	
	To recover cognitive rest is just as important as physical rest. Reading, texting, testing-even	
	watching movies can slow down a student-athletes recovery.	
	Stay home from school with minimal mental and social stimulation until all symptoms have resolved.	
	Students may need to take rest breaks, spend fewer hours at school, be given extra time to	
	complete assignments, as well as being offered other instructional strategies and classroom	
	accommodations.	
Stu	ident-Athletes who have sustained a concussion should complete a graduated return-to-play	
	before they may resume competition or practice, according to the following protocol:	
	Step 1: Completion of a full day of normal cognitive activities (school day, studying for tests,	
	watching practice, interacting with peers) without reemergence of any signs or symptoms. If no return of	
	symptoms,	
	next day advance.	
	Step 2: Light Aerobic exercise, which includes walking, swimming, and stationary cycling, keeping	
	the intensity below 70% maximum heart rate. No resistance training. The objective of this step is	
	increased heart rate.	
	Step 3: Sport-specific exercise including skating, and/or running: no head impact activities. The	
	objective of this step is to add movement.	
	Step 4: Non contact training drills (e.g. passing drills). Student-athlete may initiate resistance training.	
	Step 5: Following medical clearance (consultation between school health care personnel and	
	student- athlete's physician), participation in normal training activities. The objective of this step is to	
	restore confidence and assess functional skills by coaching and medical staff.	
	Step 6: Return to play involving normal exertion or game activity.
